

COMPASS Build Preparation Software

SEAMLESS CONVERSION FROM DESIGN TO PRINT FILE

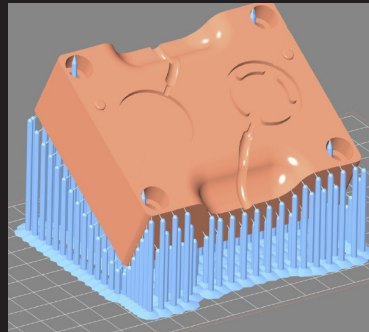

Prepare

Compass build preparation software allows users of the Flux Series 3D printers to easily position and arrange multiple parts to take full advantage of the printer's build platform. CKM and Fluxprint settings are also established at this step.

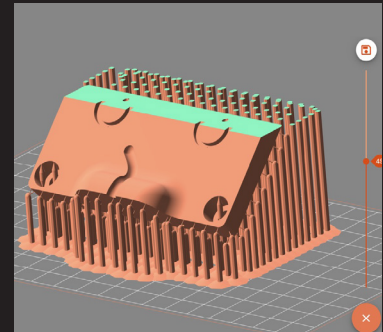

Support

Compass allows users to support an entire tray of parts in a single build in minutes. The support profiles are fully customizable and can be saved and shared for later use. Why use third-party software?

Slice

The Compass proprietary slicing engine gives users the ability to quickly and easily view individual slices of every part in your build.

Integrates with all FLUX Printers

Print files on Compass can be accessed directly on the printer through Fluxhost, the touchscreen printer controller software, via manual USB, the cloud, or private VPN.

Specifications:

16GB RAM

Intel i5 or equivalent

File Size:

100MB
